Session description

This special session deals with the problem of sizing and energy management of Energy Storage Systems (ESS) for automotive applications. It can contain batteries, fuel cells or super capacitors dependably on Electric Vehicle (EV) requirement. The design of ESS can be affected directly by the Energy Management Strategy or the technology of the energy storage components. For this reason, a good choice of energy storage components as well as the development of management strategies can improve greatly the ESS performances.

The goal of this special session is to collect ideas and solutions concerned with sizing and power management strategies of hybrid sources. The topics of interest include, but are not limited to:

- Battery Management Systems (BMS)
- Battery and Fuel cell multi-physic modelling
- State-of-Charge (SOC) and State-of-Health (SOH) estimation algorithms
- Energy management strategies in all electric.
- Control strategies for improving fuel cell and batteries lifetime
- Energy harvesting technologies and techniques
